Subject: RE: COC request for diesel HD chassis certs

Chris,

Thanks. I will take care of the application updates and the DEF range declaration early next week. I will give you a call to discuss the CO2 DAFs.

Best Regards,

Travis,

Please update the CSI for test groups EFMXD06.761A/ EFMXD06.761A to read 4 and 3 OBD deficiencies, respectively, as indicated in the ARB approval. Also, please submit the FOIA versions of the pdf applications.

I also had a question regarding CO2 DAFs on the CSI. Just want to make sure we are on the same page, so please call me. The DAF question and above issues can be worked out concurrently with the cert process.

Chris,

I added a document that describes the SCR inducement strategies to Verify and also attached it to this e-mail. It was submitted under the chassis certified test group names in the AECD reporting template section of Verify.

Regarding the DEF range, this has not changed for the 2014MY from previous years (2011-2013MY). As you know, DEF range varies with usage, but our range continues to be tied to our oil change interval which is 7500 miles. What type of declaration would you like to see for DEF range?

Please let us know if you have any other questions or require more information.

Thanks

Best Regards,

Travis,

I was looking for DEF refill interval and inducement information for the 2014 HDD applications. I checked the AECD templates and applications. We really need a description of the DEF inducement strategies and refill interval and a way to tie them to the application. Can you update the appropriate CBI documents or direct me to the correct document in verify?

DEF descriptions are needed with or without the Emergency Vehicle rule that is now in process.
